Educational Resources

To ensure that global health awareness and involvement reaches young people throughout the United States, *Rx for Child Survival* has created a legacy of educational resources surrounding one of the most critical issues of our time. The guides, curriculum and hands-on activities give educators the tools to promote an awareness of global health in K-12, post-secondary and out-of-school settings.

The *Rx for Survival* Teacher Guide

A guide for high school educators and students will be available on pbs.org/rxforsurvival in late October, prior to the documentary series premiere. For each of the series' six programs, the Guide provides ways for students to explore key science and social studies topics. The Guide includes background information about global health; lesson plans that are appropriate for international studies, health, science, economics and sociology curricula; and resources related to each of the programs.

Johns Hopkins Bloomberg School of Public Health Undergraduate Course

The Johns Hopkins Bloomberg School of Public Health, a leading international authority on public health, is developing an undergraduate course in global health, which will be available to colleges and universities beginning in Fall 2006.

For more information about educational resources, please visit pbs.org/rxforsurvival.
